December 5	Put it altogether	Put this altogether as a single team document.	Next week
December 12	Final presentation	Update the client and gain sign off.	In class Proposal by email.

This semester in Special Topics we will be writing out a simple requirements document for a hospital Web site. Each team will be given a hospital Web site – then using Chat GPT and your own discussion you will determine the features that you will be adding to the Web site. Then you will pick on feature from that list. Then you will follow the critical path outlined above for your feature. All assignments will be added to one document kept in Google docs, Dropbox, or Github.

You will submit that document to me as the client and then present your features as a project update at the end of the semester. The purpose of the presentation is to get sign off from your client and an agreement to pay your invoice.
